## ***Pacom's RTUSignal Application Wins New Product Showcase Achievement Award***

Pacom was presented a New Product Achievement Award for its RTUSignal Application during the recent International Security Conference (ISC) 2005 in Las Vegas, Nevada. The award was presented as part of the Security Industry Association's (SIA) Annual New Product Showcase.

There were 83 new products and services entered into this year's NPS competition. Fifteen companies were recognized for their innovative and security industry leading products.

Pacom's RTUSignal application enables users to configure a series of keystrokes or hot-keys on any Windows-based PC keyboard. This allows users to perform a variety of security functions from the convenience of their Windows PC. For example, pressing a combination of 'Ctrl', 'Alt, and 'A' buttons can be configured to immediately transmit a duress alarm to a central station. Similarly, another sequence of hot-keys could unlock a door, trigger a CCTV camera to start recording and even send a text message to a cellular device. These hot-keys are transmitted via the customer's LAN/WAN to one of Pacom's intelligent control panels, which is programmed to respond in the appropriate way.

Pacom's advanced high level interface enables the RTUSignal application to transmit alarms via the network and be received by the appropriate control panel. Once enabled, each Pacom control panel can simultaneously support RTUSignal applications from up to 16 PCs. The RTU Signal application runs as a background task and is discreetly disguised in the system tray. For added security, all alarm data is encrypted to NIST standards to prevent tampering, and password authentication is required by the application whenever configuration changes are required.

"This prestigious security industry award is another validation of Pacom's leading-edge technology and ability to easily integrate its products with other World-Class security companies," said Andrew Minnikin, President of Pacom Systems North America. "Pacom is quickly expanding its North American presence and will continue to partner with leading Value Added Resellers to introduce its products to more customers."
