GMS SOLO PLUS now supports 24 controllers !

To improve the competitiveness of GMS and take advantage of the increased peer-to-peer capabilities in the hardware, the licensing of GMS Solo Plus has been enhanced to support a total of 24 field controllers (formerly 16). This means that you can now intelligently inter-connect 24 control panels over a LAN/WAN without the need for a TransIT or Base Station – making it ideal for small to medium applications.

From the intuitive interface, GMS Solo Plus provides the capability to centrally manage any 24 Pacom field controllers from the convenience of a single PC. These field controllers can be any combination of 1058A, 1058, 1057 and Pacom Witness.

GMS Solo Plus is now an extremely cost-effective solution. Up to 32 workstations can centrally manage over 1500 card readers. In addition to access control, GMS Solo Plus offers powerful alarm management, elevator control and/or DVR integration.

The price for GMS Solo Plus (Part Number: GMS3-SOLOPLUS) is unchanged.

This licensing change is effective immediately for all new orders of GMS Version 3.70. Note also that the Master RTU requires V4.02 firmware (or later) to take advantage of the new 24 capacity. The Pacom Witness requires V4.00 (or later) firmware for peer to peer capabilities.
